

JavaScript Task: Pokémon Search App

Create a web page where the user enters a Pokémon name, clicks a button, and the app fetches data from the Pokémon API.

API:

```
https://pokeapi.co/api/v2/pokemon/{pokemon-name}
```

Instructions

- Create an input field for the Pokémon name.
- Create a Search button.
- Use `fetch()` to get data from the API.
- Use `async/await`.
- Use `try/catch` for error handling.
- If the Pokémon name is wrong, show: Enter a valid Pokémon name.
- If the Pokémon is found, show the result in a two-column table.

Result Table

Field	Value
Image	Pokémon image
Name	Pokémon name
Power Level	Base experience
Height	Pokémon height
Weight	Pokémon weight
